

**SoftClick®** is an easy-to-use browser-based application that allows students to send responses using virtually any device that is web-enabled, such as laptops, cell phones and PDAs. **SoftClick®** works with standard web browsers like Internet Explorer, Firefox, and Safari.

You can now give your students the option to purchase either a H-ITT remote or a **SoftClick®** virtual remote license!

The **SoftClick®** application supports *all* of the Modes in the H-ITT CRS V2 software including multiple choice, multi-digit alpha/numeric, fill in the blank, paper based testing modes, homework mode, as well as roster building functions. **SoftClick®** can be used in a classroom simultaneously with H-ITT's IR and/or RF remotes.

**SoftClick®** can also be used by faculty to collect student's responses from remote locations like off-site classrooms, homes or offices. Instructors enable **SoftClick®** for their class one time and the session ID will remain the same so student login is simple and easy to remember.

No hardware required! If your entire class uses **SoftClick®** then all you need to do is install H-ITT CRS V2 software (it's FREE) and your setup is done.

Students purchase a **SoftClick®** license key at H-ITT's online store ([www.h-itt.com/shop/](http://www.h-itt.com/shop/)) then simply log in to the **SoftClick®** webpage ([www.h-ittSoftClick.com](http://www.h-ittSoftClick.com)) and enter the session ID (assigned by the instructor), select the question type (i.e., multiple choice, multi-digit, test, homework, etc.) then answer questions just as they would with a H-ITT handheld remote.

Responses received via **SoftClick®** are compiled with responses from H-ITT remotes to display a results histogram, and the data is always saved for analysis, grading and reporting with the Analyzer application.

The **SoftClick®** user's pallet is designed for small screen applications typically used on cell phones and the like. Below are some examples of answer pallets:
